

## MAGNUM Sol Premium Ceiling heaters

MAGNUM Sol Premium ceiling heaters can be installed in a suspended ceiling and, thanks to the integrated suspension bracket, they can also be directly attached to any ceiling. This panel can be used as main heating or as additional heating in a bathroom. There are 2 outputs available: 300W and 750W. These heating panels produce exclusively radiant heat. The high intensity of the infrared heat waves results in an optimal feeling of comfort after only a short time.

The ceiling heaters heat everything and everyone within the radiation range, just like the sun heats the earth. This with a very short warm-up time. It is therefore ideal for rooms that are not continuously occupied, need to be brought up to temperature in a short time and have little wall space available.

Several installation options

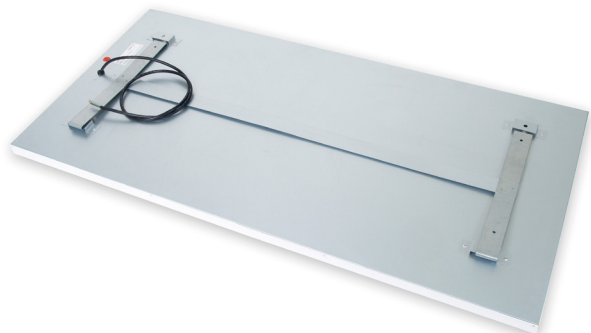

MAGNUM Sol Premium Type 300

### Specifications

System type	Electric
System height	30 mm
System width	592 mm
Min. setting height	2,2 m
Installation	Ceiling
Power	300 or 750 Watt
In wet areas	<b>V</b>
Type of heating	Infrared
System ceiling	<b>V</b>
Ceiling mounting	<b>V</b>
Certification	Kema
Warranty	2 years

MAGNUM Sol Premium Type 750

## Technical details

- Available in 300 and 750 Watt
- Connection voltage 230V/50Hz
- Class IP54
- Colour RAL 9010

## Installation methods

MAGNUM Sol Premium ceiling heating panels are easy to install in any suspended ceiling or to attach directly to the ceiling using the integrated suspension system. Each panel is equipped with its own suspension system.

The panels can be thermostatically or modulatively controlled, which minimises energy loss. They can be controlled through a simple on/off thermostat or a wireless thermostat.

## Package content

- Suspension bracket
- 0,5 metre connection cable
- Installation instructions

## Warranty

2 year warranty on the electrical function.

Art.nr.	Description	Type	Power	Dimensions
