

ET44 WiFi Thermostat

Thermostat

The stylish ET44 WiFi thermostat is a programmable thermostat designed to control electric floor heating systems.

For the ET44 WiFi thermostat, install the App on your smart device to control the heating system remotely. The App is available in the Apple App Store and on Google Play. Within the App, you can programme and adjust settings. To control different rooms, additional thermostats can easily be added.

Besides the Wi-Fi connection, this thermostat can also work as a simple stand-alone unit (choose temperature and mode). It is fully programmable within the App. Therefore, it is suitable for easy use and also perfect for hotels and holiday homes.

An open window function is also included. If the temperature suddenly drops, the thermostat automatically switches off, preventing extra electricity costs.

Packaging contents

- Thermostat
- Screws
- Adapter
- Sensor
- Installation instructions
